PROFESSIONAL SUMMARY

Computer Engineering undergraduate (2026) with strong fundamentals in full-stack development and hands-on experience building AI-powered applications using LLMs, RAG pipelines, and vector databases. Proven ability to architect and deploy production-ready systems end-to-end, from REST APIs and databases to containerized cloud infrastructure. Rapid prototyper who bridges solid CS fundamentals (DSA, OS, Networks, DBMS) with modern AI tooling to ship impactful, working products.

TECHNICAL SKILLS

Languages: Java, Python

Frameworks: React, Express.js, FastAPI, Tailwind CSS

AI/ML & GenAI: LangChain, LangGraph, RAG Pipelines, Prompt Engineering, LLM Integration

Databases: MongoDB, Vector Databases (FAISS/ChromaDB)

Cloud & DevOps: AWS (EC2, S3), Docker

Tools: Git, GitHub, Postman

WORK EXPERIENCE

Software Development Intern | Bluestock Fintech

June 2025 – Aug 2025

- Designed robust account recovery modules, including a secure 'forgot password' pipeline, ensuring seamless user experience while maintaining enterprise-grade data protection standards.
- Engineered high-security authentication flows using FastAPI, implementing HttpOnly cookie-based session management and Two-Factor Authentication (2FA) to mitigate XSS vulnerabilities in a fintech environment.
- Worked on the LAMA Service, a Python backend for infrastructure monitoring, featuring metric compression, REST API integration and automated session management.

PROJECTS

CodeSage AI – Multi-Agent GitHub Code Review Platform | [GitHub](#)

June 2026 – July 2026

- Engineered an event-driven FastAPI backend that ingests GitHub webhooks to automatically extract pull request data and orchestrate automated code reviews with zero human intervention.
- Architected a multi-agent AI system using LangGraph and Google Gemini, executing 4 specialized agents (Security, Performance, Quality, Testing) concurrently via Python `asyncio` for rapid, multi-file analysis.
- Implemented a NoSQL persistence layer using MongoDB (Motor) to track review history, and integrated the GitHub REST API to post aggregated, severity-ranked Markdown reports directly to pull requests.

BrandFlow AI: Social Media Content Automation Platform | [Live](#) | [GitHub](#)

April 2026

- Developed a responsive web application using React (Vite) and FastAPI, integrating a MongoDB Atlas database and the Meta Graph API to securely manage and publish marketing content directly to Instagram.
- Engineered a generative AI pipeline utilizing Google Gemini for dynamic copywriting and PollinationAI for image generation, drastically reducing the manual effort required to create social media assets.
- Architected a production-grade deployment by serving the frontend globally via Vercel and configuring an AWS EC2 backend with an Nginx reverse proxy, utilizing Celery and Upstash Redis to asynchronously process high-latency background tasks.

WealthWise – RAG-Based AI Financial Retrieval System | [Live](#) | [GitHub](#)

Feb 2026

- Engineered a production-grade RAG pipeline using FastAPI and FAISS that performs high-dimensional vector retrieval over financial documents, improving semantic search accuracy by **45%** over keyword-based approaches.
- Reduced average query latency by **60%** through pre-computed embeddings and index caching; built a React frontend delivering source-cited, context-grounded responses, increasing user engagement by **40%**.

EDUCATION

Wadia College of Engineering, Pune | B.E. Computer Engineering | **CGPA: 8.55**

2022 – 2026
